Naturally occurring in both industrial hemp and cannabis, Cannabidiol (CBS) is the most abundant of the non-psychoactive cannabinoids, researched by the scientific community for its many potential uses. A derivative of CBD-A (cannabidiolic acid), CBD is produced when CBD-A makes contact with heat. "CBD oil" is simply cannabis oil derived from either marijuana or industrial hemp. It contains significant amounts of cannabidiol (CBD).

As in the case of Isodiol's CDB99, and in the recent consideration and efforts to obtain this breakthrough ingredient, natural Cannabidiol (CBD) has been sourced and extracted from the mature aerial stalks of the industrial hemp plant and is certified and guaranteed by Isodiol S.A. to be all-natural and pharmaceutical grade.
